NOTE: Site Information from Henderson Co. GIS, Google Earth, on-site measurements. R/W per NCDOT. Verify all underground utilities prior to digging. Call 811-locator service.

PLANTING: Layout and spacing of plants shall be based on this plan. Flag all tree and shrub locations. Paint perennial and native grass beds on the ground. Obtain approval of the landscape architect/tree board representative prior to installation. All plants shall meet the American Std. for Nursery Stock ANZI z60.1

Obtain soil samples after beds have been tilled and amended. These samples can be compared to the samples provided to the Tree Board to determine current conditions prior to planting. Plant beds shall be tilled 6-8" and amended with 1 part AMY planting mix per 3 parts native soil. Fertilizer and lime shall be incorporated per the soils report provided to the contractor. Tree pits shall be dug min. 2x size of container or root ball and amended as noted above. Perennial beds shall be amended as above. Beds for native grasses shall be tilled, fertilized, and limed per soils report- no additional amendments needed for these beds.

All beds and plants shall receive 3" double ground, composted dark hardwood mulch after planting.

The fescue grass area along the curbs shall be aereated and overseeded with a mix of white clover and "low grow" fescue ("Links Blend"-Site One Supply) or equal at rate recommended by seed producer for overseeding.

Watering will be provided by the City of Hendersonville based on availability of tap within the site. If not available, the Contractor shall make provisions to water plants for the establishment period- 6 weeks.

The Contractor shall guarantee plants for one growing season until establishment or 6 months after acceptance of complete installation.
